DETAILED ACTION

Remark

1. Claims 1-5, 7-10, and 18 have been previously cancelled. Claims 6, 11-17, and 19-22 are pending for reconsideration.

Drawings

2. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the replacement drawing is informal. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for the formal drawings will not be held in abeyance.

Allowable Subject Matter

3. Claims 6, 11-17, and 19-22 have been allowed.

Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance:

Regarding claims 6, and similarly in claims 15 and 20, the closest prior arts of record issued to Edens and Rostoker either alone or in a combination fails to teach or suggest each and every feature of the present invention for a motor vehicle optical ring network, comprising: an

Art Unit: 2623

optical data line configured in a ring network and having a plurality of data channels; a plurality of data sources each connected to the optical data line, where each of the plurality of data sources provides compressed multimedia data onto the optical data line and each of the plurality of data sources is free of decoders that provide decompressed multimedia data onto the optical data line; and at least one data sink connected to the optical data line and comprising a video display device, and that receives the compressed multimedia data from the optical data line, where the data sink includes a bit stream decoder to decompress the received compressed multimedia data and provide (i) a decompressed video data signal indicative thereof to the video display device and (ii) a decompressed audio signal; where the at least one data sink also includes a control unit that selectively adapts the decompression of the received compressed multimedia data by the bit stream decoder based upon the compression format of the received compressed multimedia data, where the format of the received compressed multimedia data may be one of a plurality of compression formats, where the control unit also controls the data channels of the optical data line for transmitting the compressed data between the data sources and the data sink.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
